managed email services for business

Computer data is your company's most valuable asset, but also where your company is most vulnerable

why

- It doesn't take a fire or a flood to cause a disaster.
- Accidental deletions, malicious acts by employees and theft can cause huge losses.
- All hard disks fail - we just don't know when.

what

- One of the easiest and most efficient ways of protecting your data is with an offsite backup facility.
- Safeserve's data backup service gives you the peace of mind that your data is secure, confidential and retrievable 24 hours a day.
- Once data is encrypted and backed-up to our UK servers, it is backed-up from our UK site to servers in mainland Europe – offering you double the protection.

how

- Firstly, we listen to you – in order to provide a service tailor-made for you and your company, whatever its size and number of employees.
- Our technicians will configure your system to perform scheduled backups at times to suit you.
- Military-grade 128-bit encryption or “Top Secret” 256-bit encryption ensures that your data is stored with complete confidentiality. Options are available for AES, Blowfish and 3DES.
- Depending on your requirement, we enable immediate internet file retrieval or DVD/hard disk recovery.
- We offer flexible options for including Exchange, SQL Server and other open file data.
- The service can run in background, as a program in console session or on a separate Backup Server to combine backups from several servers.
- The service complies with all statutory data recovery requirements plus all EU, UK and US legislation.
- Assistance with any aspect of the service is just a phone call away.
