

SecureMail

IS SOMEONE ELSE READING YOUR EMAIL?

- **30% of IT staff admit to reading confidential files***
- **69% of organisations reported serious data leaks caused by malicious employee activities or non-malicious employee error***
- **25% of users with a personal email account (Yahoo, Hotmail etc.) regularly forward company email messages to these personal accounts***
- **Hacked emails are one of the prime sources for identity thieves***

WE'LL TAKE CARE OF YOU

Bespoke solutions ensure your email system is confidential, secure, compliant, cost-effective

IT'S WHAT WE DO

safeserve.com
managed email services for business

Email security is now a major challenge for all businesses, particularly those involved with sensitive or confidential information

why

- Legislation has created a legal framework for dealing with customer and employee information and there are severe penalties for breaches.
- It is relatively easy for those with access to your network to read other people's emails without their knowledge.
- Unsecured mail can be intercepted in transit, confidential personal and financial information may easily be stolen.
- No one can be sure that their recipients' email system provides a secure repository for sensitive emails.

what

- Safeserve SecureMail is an Identity Based Encryption (IBE) system that is as easy to use as unencrypted mail.
- What makes Safeserve SecureMail unique is that the recipient does not need to pre-register, enabling you to send secure emails to anyone as easily as a normal email.
- Seamlessly protects the internal and external privacy of email and attachments without the need for any special hardware or software.
- Even while stored on internal mail servers or as internal files, the secured emails remain encrypted. They are only decrypted to the screen when viewed by the authorised recipient.
- Automated or bulk emails, such as financial statements, can be automatically encrypted as can individual messages based on content.

how

- We discuss your requirements with you so that we may tailor our service to your specific needs. We offer Safeserve SecureMail as a service or we can install complete systems to integrate with your existing mail servers.
- Security is assured by military-grade AES 128-bit encryption.
- SecureMail is easy to use with any mail client, but plug-ins for Outlook and Outlook Express simplify the 'send' process down to a single click.
- After a simple authentication process, users can read and securely reply to encrypted mail from any desktop.
